The following questions of general interest to all prospective tenderers have been raised in the course of the tender procedure.

**Question 1:**
Can we propose other techniques in addition to the technique of the online survey while supporting with arguments?

**Answer 1:**
- We think the most efficient mode of survey data collection will be online for the bulk of respondents. Respondents will be officials and experts well positioned to respond to survey questions and should not have connectivity issues.
- To reach requested response rates, we expect the successful bidder to propose additional data collection techniques to supplement the primary online survey mode and increase the response percentage.

**Question 2:**
What are the levels of detail in the analyzes apart from geography (Tunisia, Algeria, Morocco, Egypt and Libya) and the profile of the stakeholder?

**Answer 2:**
- There will likely be need for additional geographic analyses, e.g., regional, EU, and AU levels, among other groups of states.
- We also expect to have additional cross-tabs, though not all have been determined yet.
- We expect to discuss and determine the additional specific cross-tabs and other descriptive statistics to be delivered with the successful bidder.
Question 3:
What is the approximate duration of the instrument survey to be conducted?

Answer 3:
• We expect to have different versions of the survey targeted to different respondent types (using skip patterns).
• We expect that survey completion will not require more than 20 minutes.
• We expect the successful bidder to pilot the survey, to ensure that it does not require more than 20 minutes to complete online and to identify specific adjustments needed to reduce completion time.

Question 4:
Apart from the identified target groups can we add other stakeholders including the potential immigrant?

Answer 4:
• In general, the survey targets migration experts, officials and other high-level stakeholders. Of course, migrants themselves are stakeholders but the purpose of the survey is to assess change at the national level. This is something experts are best placed to address.
• We will provide a list of targeted respondents approved by the donor for the survey.
• The final respondent list will be discussed the winning bidder.
